Project

- Group project
  - Each group should have 1-3 students
  - Please form a group by **Week 3** and report the instructor
- Design, implement, and demonstrate/evaluate attack/anomaly detection system using AI/machine-learning technologies
  - Will work on iTrust dataset. Please download from https://www.sutd.edu.sg/itrust/itrust-labs/datasets/ and study early!
  - We plan to have lecture on iTrust dataset and testbed overview on **Week 6**.
  - You can reproduce detection mechanisms published in academic papers.
  - **Original idea will result in higher score.**
- Milestones
  - Make interim presentation on the design, implementation and demo plans in **Week 8**
  - Make final presentation with demo of the implemented system in **Week 13**
- Grading is based on demonstration and presentation.
  - 25% for interim + final presentations and demo
  - 5% will be based on peer review by group members
  - Final presentation should also be recorded and submitted.
